1. PROJECT PROFILE

Project Profile:	City Sync
Objective:	The primary objective of City Sync is to create a seamless, reliable, and efficient platform that connects customers with skilled service providers for various at-home services. This project aims to revolutionize the urban service industry by leveraging technology to enhance accessibility, transparency, and user experience.
Platform of Application:	Service base Web Application
Front End Tool: Back	Django Jinja2
End Tool: Project	Django (SQLite)
Duration :	6 Months
Project Guide :	Mr. Harsh Patel

2. EXISTING SYSTEM

- The process of finding and booking home services is often managed manually.
- Users who need home services like plumbing, cleaning, or electrical repairs must search for service providers through word-of-mouth, advertisements, or online directories.
- Service providers looking for work have to rely on local networks or personal referrals, limiting their reach and potential clients.
- This traditional approach is time-consuming and inconvenient for both customers and service providers.
- So our website provides a very seamless and compact facilities to customer and partners compare to other service provider companies.

3. NEED FOR NEW SYSTEM

- A large number of service providers and users can connect through a digital platform.
- Users and service providers can participate from anywhere, expanding opportunities for both parties.
- A time- and cost-saving system that streamlines service bookings and reduces the hassle of finding reliable professionals.
- In general, there are many companies and organisation those provides services but the process of booking or register a new service is vary difficult but in our website customer and service providers are book or register there services in very convenient way.

This screenshot shows the 'Sub categories' page of a CitySync application. On the left, a sidebar lists various sections like Dashboard, Authentication and Authorization, Core, and Sub categories (which is currently selected). The main content area displays a form for adding a new sub category. It includes fields for 'Category' (with a dropdown menu), 'Name' (with a dropdown menu), and 'Description' (a large text area). To the right of the form are three buttons: 'Save' (green), 'Save and add another' (blue), and 'Save and continue editing' (light blue). The top right corner of the screen shows the Silver Oak University logo and name.

13. FUTURE ENHANCEMENT

In the future, City Sync will introduce Google Authentication, allowing users to sign up and log in effortlessly using their Google accounts. This will enhance security and provide a seamless login experience.

A real-time notification system will be implemented to keep users updated on active service providers and ongoing bookings. Additionally, users will receive SMS and Email notifications for booking confirmations, service updates, and promotional offers, improving engagement and convenience.

To expand the platform's reach, SEO optimization will be a key focus, ensuring better visibility on search engines and attracting more users.

For added benefits, premium membership plans will be introduced, offering exclusive features like priority booking, discounts, and enhanced customer support, giving both service providers and customers a better experience.

Also Add the Payment Gateway for the Payment system.

14. BIBLIOGRAPHY

Project Overview :

CitySync is a service-based platform developed using Django, designed to facilitate connections between users and service providers (partners). The platform includes user authentication, partner registration with OTP verification, an admin approval system, and a role-based dashboard for managing services.

Libraries and Dependencies :

The following libraries were used in the development of this project:

1. **Django (5.1.6)** – A high-level Python web framework used for building the CitySync backend.
 1. Source: Django Software Foundation. (2025). *Django 5.1.6 Documentation*. Retrieved from <https://www.djangoproject.com>
2. **Django REST Framework (3.15.2)** – A powerful toolkit for building Web APIs in Django.
 1. Source: Encode. (2025). *Django REST Framework Documentation*. Retrieved from <https://www.django-rest-framework.org>
3. **Django Jazzmin (3.0.1)** – A modern admin panel UI for Django.
 1. Source: Jazzband. (2025). *Django Jazzmin Documentation*. Retrieved from <https://django-jazzmin.readthedocs.io>
4. **Django REST Framework Simple JWT (5.5.0)** – A JSON Web Token authentication system for securing APIs.
 1. Source: SimpleJWT Team. (2025). *DRF Simple JWT Documentation*. Retrieved from <https://django-rest-framework-simplejwt.readthedocs.io>
5. **WeasyPrint (64.1)** – A library for generating PDFs from HTML and CSS.
 1. Source: CourtBouillon. (2025). *WeasyPrint Documentation*. Retrieved from <https://weasyprint.org>

14. BIBLIOGRAPHY

6.Pillow (11.1.0) – A Python Imaging Library (PIL) fork used for image processing.

1. Source: Python Imaging Library. (2025). *Pillow Documentation*. Retrieved from <https://pillow.readthedocs.io>

7.PyJWT (2.9.0) – A Python library for creating and verifying JSON Web Tokens (JWTs).

1. Source: PyJWT Developers. (2025). *PyJWT Documentation*. Retrieved from <https://pyjwt.readthedocs.io>

8.SQLParse (0.5.3) – A library for parsing, splitting, and formatting SQL statements.

1. Source: Python SQLParse. (2025). *SQLParse Documentation*. Retrieved from <https://pypi.org/project/sqlparse>

9.Brotli (1.1.0) & Zopfli (0.2.3.post1) – Libraries for data compression and performance optimization.

1. Source: Google. (2025). *Brotli Compression Algorithm*. Retrieved from <https://github.com/google/brotli>

10.CSS Selectors & HTML Parsing

•**cssselect2 (0.8.0), tinycss2 (1.4.0), tinyhtml5 (2.0.0), webencodings (0.5.1)** – Used for parsing and handling CSS and HTML structures.

•Source: Python CSS Selectors. (2025). *cssselect2 & tinycss2 Documentation*. Retrieved from <https://pypi.org/project/cssselect2>

11.Other Libraries

•**asgiref (3.8.1)** – ASGI tools for Django.

•**cffi (1.17.1) & pycparser (2.22)** – C foreign function interfaces used in cryptographic operations.

•**pydyf (0.11.0)** – Used internally by WeasyPrint.

•**pyphen (0.17.2)** – For text hyphenation.

•**six (1.17.0)** – A compatibility library for Python 2 and 3.

•**tzdata (2025.1)** – Time zone database.

Conclusion:

CitySync was built using modern web technologies, with Django as the core framework and multiple third-party libraries enhancing its functionality. The system integrates authentication, partner management, and an admin panel for efficient service management.

THANK YOU
